

WHY ICE-9?

Headlight restoration can be extremely profitable if it can be done quickly. A quick, quality headlight restoration has never been possible until now. We have personally talked to hundreds and hundreds of owners and managers of auto repair shops, quick lubes & tire and brake shops. The majority of them are so frustrated with the kits and methods that are available that they have abandoned headlight restoration altogether and understandably so. Unfortunately, they are missing out on thousands of dollars of revenue every month. THIS is why the Ice-9 Headlight Restoration System was created.

There are roughly 290 million cars on the road today in the U.S. The average age of these cars is around 12.5 to 13 years old. On average 1 of every 3 cars on the road today could use a headlight restoration. These cars are coming through your shop on a daily basis

There are several ways to restore headlights and there are some good kits available that can produce good results. However, these kits are way too time and labor intensive. From a business standpoint, they are inefficient and don't make a lot of sense.

The Ice-9 Headlight Restoration System, featuring Smart Restore Technology, transforms a tedious, labor intensive task into a quick, effortless and extremely profitable service. Combining extremely low labor costs with professional results makes the Ice-9 Headlight Restoration System the go-to choice for quick-lubes, tire & brake shops, quick-lane service centers and auto repair shops.

Equipped with Smart Restore Technology, the Ice-9 Headlight Restoration System allows anyone, with no experience, to achieve a high quality, durable headlight restoration in just 6 to 10 minutes from beginning to end. This innovation makes headlight restoration quicker, simpler and more profitable than ever before.

Smart Restore Technology features a unique chemical formulation that combines our signature Liquid Sandpaper with our Liquid Titanium UV Glaze. Liquid Sandpaper effectively penetrates the polycarbonate lens surface, dissolving and removing the initial layer of oxidation. Meanwhile, our Liquid Titanium UV Glaze is a resin based, wipe-on formula that includes liquid titanium, advanced UV inhibitors, a bonding agent and a leveling agent for a smooth, durable finish.

“WORLD’S FASTEST, EASIEST & MOST PROFITABLE WAY TO RESTORE HEADLIGHTS.”
